

Diagnostic failures: when executable evidence needs stronger semantics

Dataset	ok	no_candidates	no_valid_chain	Interpretation
MetaQA	397	203	0	High grammar-hit setting; compact evidence is usually available.
n=600				
WikiMovies	196	4	0	Mostly stable because questions are simple 1-hop.
n=200				
MLPQ	389	0	0	Cross-lingual grounding and relation alignment remain difficult.
n=389				
KQAPro	272	317	9	Operators and qualifiers exceed simple relation-chain evidence.
n=598				

Use this as diagnostic scope evidence: HRG recovers structure, while semantic filters remain future work.
